Auto Medicine Dispensary

- **What it does:**

- Would dispense daily medicines for one's home use
- Pros- avoid people forgetting to take medicine, taking the wrong pills, or taking a wrong dose of medicine

- **Physically look:**

- Similar to Keurig (size/shape)
- Interactive touch screen for changing settings (time to dispense, color of week, etc)

Human Interface/Interactivity

- **Human interface:**

- A screen would prompt users of the day and what medicine is being dispensed
- An alarm or audio prompt to remind users to take medicine after it was dispensed
- Manually filled with a monthly pill prescription by a caretaker or the user

- **Interactivity:**

- Machine would dispense medicine into a small cup or container for the person to take
- Screen would display if the medicine is running out and could display a phone number of a physician or caretaker
- Could also be child friendly by having more vibrant displays and child proof locks
